Salman Abdul Ghaffar

Product led transformation leader

salman@prodmap.co.uk

linkedin.com/in/pmsalman

Senior Product Manager driving strategy, architecture, data, monetisation, and end-to-end delivery across banking, payments, government, and critical public infrastructure—building and growing complex, regulated products across global markets.

Delivered bank-grade, multi-tenant platforms and mobile apps from vision to enterprise-scale adoption, serving millions of users across the UK and Middle East, including **Monzo**, **First Abu Dhabi Bank**, and the global VISA ecosystem.

Trusted by C-level, commercial, and technical stakeholders to align product vision, architecture, and business outcomes across global, high-stakes environments.

Directed product across RFP/RFI, pre-sales, and contract negotiations—shaping contracts, SLAs, and product commitments to secure enterprise deals and drive market expansion.

Drove pragmatic adoption of AI within a regulated national platform—balancing innovation with governance and operational constraints to improve service outcomes.

Built complex products across hardware, telecom, mobile, and network technologies as a software engineer for 6+ years before leading product at scale—bringing engineering discipline to strategy, architecture, and execution.

Brought Big Four (Deloitte & EY) discipline and predictable execution to large-scale transformation programmes.

Career snapshot

Sector experience

Financial Services & Commercial Platforms

- Tier-1 banking & retail
- Tier-1 insurance
- Pharmaceuticals
- Human resources

Government Ministries & Regulators

- Ministry of Education, Ireland
- Ministry of Agriculture, Northern Ireland
- Driving Standards & Licensing Authorities, UK
- Board of Technology, Malaysia

Public Infrastructure & Utilities

- Energy & electricity
- Social housing

Telecommunications

- Large-scale telecom platforms

Academic qualifications

M.Sc. Information Systems
University of Leeds
2004-2005

B.Eng. Information Technology
Hamdard University
1999-2003

Machine Learning (Python)

Professional Experience

Senior AI Product Manager (Contract) **April 26 - current**
Ocorian, Belfast, UK

Ocorian is a global fund, corporate and private client services provider, supporting asset managers, financial institutions and family offices across 25+ jurisdictions.

Role: Reporting to the CIO, act as the business-IT relationship lead for HR transformation

- Created the vision for Platform-I, a future-state HR technology platform designed to transform HR service delivery across the employee lifecycle through AI, automation, integration and self-service.

- Partnered with the Head of HR Operations and global HR leadership across **20 countries**, translating business challenges into a strategic HR technology and AI roadmap and prioritising initiatives based on value, feasibility and ROI.
- Led the adoption of AI and automation across HR, applying GenAI, RAG, prompt chaining and orchestration to identify and deliver high-value transformation opportunities.
- Delivered live automation across core HR processes, including Change of Circumstance and reference-letter generation, reducing processing time by **over 80%** and improving SLA compliance across 20 countries.
- Designed and built an AI-enabled end-to-end employee onboarding platform, integrating recruitment, SmartRecruiters, BambooHR, iManage and Veremark. Took the concept from future-state vision and product design through to a working MVP, now transitioned to the development team.
- Established an MVP-led transformation model, enabling rapid validation and incremental delivery of AI and automation initiatives rather than traditional big-bang programmes.
- Shaped the future-state HR technology ecosystem, including process architecture, integrations, data flows and opportunities for AI-enabled self-service across the employee lifecycle.
- Represented the HR transformation strategy to the **CIO and CDO**, providing executive-level visibility of roadmap, investment, risks, capacity, benefits and ROI.
- Directed resourcing, budget and delivery priorities for a Mauritius-based technology team, aligning delivery capacity with strategic transformation priorities and business demand.
- Built stronger alignment between HR and IT by introducing structured problem discovery, prioritisation and value assessment, accelerating delivery of high-impact transformation initiatives.
- Technology & tools: OpenAI, Workato, Power automate, custom apps

Product Owner (Contract) **Mar 24 - Feb 26**
Ernst & Young (EY), Dublin, Ireland

EY is a global leader in assurance, tax, and advisory services, helping clients drive growth and navigate complex challenges.

Role: Product Owner across 3 delivery teams on OLCS — national platform serving 90,000+ teachers, ~4,000 schools, and 20,000+ school users, managing statutory leave and payroll workflows in highly regulated enviornment.

- Reported to EY Partner, owned roadmap integrity, risk reporting, and executive progress reviews for a regulated public-sector transformation.
- Converted undocumented legacy logic (policy, tribal knowledge, system behaviour) into structured, testable business rules, accelerating development and testing.
- Increased velocity ~5 to 30 story points by enforcing backlog prioritisation, dependency management, and outcome-focused delivery.
- Introduced risk and progress overlay mapping on story maps to expose cross-team dependencies and unblock gridlock; shifted executive discussions from blame-driven to solution-led decisions.
- Leveraged flow metrics to influence senior EY and Ministry leadership; secured programme transition from Scrum to Kanban, improving predictability and cycle-time.
- Embedded GDPR-by-design controls (RBAC, auditability, data minimisation, encryption safeguards) into requirements; strengthened compliance for high-risk data.
- Entrusted with 2 additional teams. Contract extended multiple times based on measurable impact.
- Conceived and piloted Generative AI early-warning system to flag high-risk leave submissions; reduced claim rejection rates by ~50%, preventing payroll disruption and operational failure.
- Re-engineered multiple fragile legacy workflows and unlocked 5-figure quarterly operational hour savings across the programme while preserving core database integrity.
- Technology & tools: Azure cloud, MFA, SSO, MUI, Figma, Visio, GitHub.

Product Owner / Founder 2023 – Present
Consumer product, Amazon Retail (UK)

- Launched a consumer brand on Amazon UK (0→1): brand identity, product design, packaging, compliance. Achieved 4.8 star rating.
- Conducted competitor, keyword, and customer analysis to position product and define roadmap.
- Reduced TACoS via CVR optimisation, A/B testing, and keyword targeting; tracked BSR, CTR, and conversion metrics.
- Directed creative output: briefed designers, authored marketing copy, A+ content, and listing assets.

Product Manager (Contract) Nov 23 - Aug 24
Malaysian Board of Technology, Kuala Lumpur, Malaysia

MBOT is a government-funded professional body responsible for regulating and recognising technologists, undertaking a programme to modernise its member recognition platform and associated business processes.

Role: Brought in initially to support sales, then subsequently appointed to lead product discovery and delivery.

- Led product discovery, defining vision, objectives, and core user segments.
- Established the stakeholder engagement and governance approach across regulatory and operational groups.
- Elicited and prioritised functional & non-functional requirements, creating and managing the product backlog.
- Defined KPIs and success measures to track adoption, delivery performance, and operational impact.
- Led end-to-end product delivery, achieving on-time launch of the online application and mobile app with an 80% increase in engagement
- Managed a globally distributed team spanning Egypt, India, Iran, Nigeria, Malaysia, and Pakistan across multiple time zones

Senior Product Manager (Contract) Sep 21 - Sep 23
Reward Insights, London

Reward, a global fintech company, partners with banks and retailers to enhance customer engagement. The company aimed to expand into global markets by developing an analytics-backed and API-based loyalty platform as a service (PaaS).

Role: Led the Global Merchant Marketplace (GMM) platform from concept to launch and scaled globally.

- Directed platform vision, roadmap, and OKRs to align product execution with enterprise strategy and scalable growth.
- Led the development of frameworks for product discovery, governance, and operational acceptance testing.
- Ensured compliance with industry standards (PCI-DSS & GDPR) and KSA/UAE specific requirements.
- Defined and managed the product backlog, attended daily scrum meetings, led sprint reviews.
- With a cross-functional scrum team, transformed GMM concept into B2B2C mobile app platform within six months.
- Collected customer feedback using prototypes and engagement metrics to ensure end-to-end mobile journey remains user-centric.
- Designed a unified data model for multi-tenancy, enabling separate internal deployments and data warehouses.
- Collaborated with data operations to establish data pipelines and defined/tracked KPIs for the platform.
- Analysed offer redemption data to drive actionable insights, shaping offer strategies and the roadmap.
- Collected refund data, optimised the refund algorithm, reducing system gaming risk by an additional 50%.
- Launched cross-border, multi-language capability across 20+ countries, whilst de-risking finance and retail invoicing through automated commission and FX validation.
- Aligning with the industry trends, differentiated the product through real-time cashback and SDK, securing a competitive victory for a major UK digital bank, Monzo.
- Transformed the servicing capability through innovating an internal service management target operating model.
- The new operating model was underpinned by a servicing system fully integrated with the internal content management system (CMS) and external banks via APIs.
- New operating model enabled efficient customer query management, delivering internal cost savings of over £150K per year per bank partnership, and enabled an additional revenue stream.

- Innovated "Smart resolutions" for cashback-related queries, automating disqualification reasons, leading to an 80% reduction in customer queries and exceptional user experience on mobile applications.
- Developed and implemented a profit and loss model and pricing strategy, based on product offerings.
- Partnered with senior leaders at First Abu Dhabi Bank (UAE) & Warba Bank (Kuwait); led SIT & UAT and OAT, ensuring smooth adoption of the product.
- Achieved break-even in the first year, followed by million+ profits in the second year.
- Technology & tools: AWS Lambda and Athena, Okta, .NET, SQL Server, Lucid chart, Swagger, Testmo, JIRA, Datadog, Confluence, GitHub, Figma and Tableau.

Market Impact:

- Targeted retail offers achieved a 30% increase in customer engagement and a 15% rise in card usage for partner banks. This competitive advantage stems from real-time cashback at the point of sale (POS) through seamless integration with the bank's payment system.
- Created an onboarding plan that streamlined the process, reducing time-to-market from 6 months to 10 weeks.
- Assisted in onboarding local and global banks with a million-plus customer base.
- Partnered with the regional director to establish a strategic partnership between Reward & VISA.
- Partnered internally to manage the contract negotiations with major banks, leading to successful agreements with major local and global banks including **Monzo** and Qatar National Bank.
- Led the product workstream in enterprise pre-sales engagements, resolving complex architectural and regulatory challenges to strengthen deal progression.
- Led product positioning with marketing, sharpening value articulation to improve enterprise win rates and market traction.

Principal Product Owner (Contract) **Feb 20 - Sep 21**
Liberty IT, Belfast

Liberty Mutual Insurance, a Fortune 100 company, boasts a $39B+ revenue and a global presence.

Role: Led the design and development of equine and livestock underwriting products from concept to launch.

- Led product development and digital transformation in highly regulated environment.
- Built strong relationships with stakeholders and negotiated timelines, estimates, benefits, and risks.
- Collaborated with cross-functional teams in engineering (XP), design (UX/UI), and business to create, prioritize, and deliver the product roadmap and backlog.
- Partnered with user expert for UX design, user research and acceptance testing.
- Gathered regular feedback through demos and influenced business thinking/decision-making.
- Coached business on multiple feature prioritisation techniques and established theme scoring.
- Taking initiatives, performed continuous discovery to define and refine product vision, business goals, metrics, user personas, empathy maps, service blueprint, customer journey & revenue streams.
- Designed flexible data and application model, allowing smooth application workflow management.
- Analysed underwriting rules, crafted product requirements which delighted the client.
- Provided delivery leadership and meticulously organised and managed dependencies.
- Fully leveraged automatic document generation to reduce customer waiting times, automating invoice generation, policy generation and payment schedules.
- Monitored conversion rates/revenue to take corrective actions.
- Cultivated a culture of transparency, inspection and adoption through mentoring and coaching.
- The team became an “Exemplar team” within the organisation, winning CIO awards for product excellence.
- Technology & tools: AWS serverless, Angular, DynamoDB, Mural, Pivotal tracker, InVision, Confluence & Heap.

Market Impact:

- Delivered internal equine underwriting product within 6 months. Followed by release to external brokers including quick quote mobile app.
- Achieved a 75% reduction in application processing times, 98% reduction in document generation time and enabled the business to roll out the product to thousands of brokers across the US, yielding double-digit growth in the first quarter post-deployment.
- Over three million of business written within 3 months of product launch.

Senior Business Analyst (Contract) **Mar 19 - Nov 19**
Northern Ireland Electricity (NIE), Belfast

NIE, managing Northern Ireland's electricity infrastructure, pursued business transformation in the regulatory period.

Role: Consulted at NIE, building a ground-up business process improvement capability.

- Led the formulation of a systematic business transformation framework (DMAIC based).
- Negotiated the framework with the NIE board of directors, influencing the highest level of the organisation.
- Acquired board approval for funding execution phase.
- Partnered with a project manager, formed a team of 3 BAs and led parallel workstreams across Finance, Assets and Property management.
- Partnered with the programme director, established a prioritisation framework based on NIE values and goals.
- Conducted workshops with wider stakeholders and ranked business processes based on criticality & efficiency.
- Coached programme team on business process modelling (BPMN), value chain, and process cycle efficiency.
- Led the creation of tech/business architecture viewpoints to aid IT strategic planning.
- Led the documentation of as-is/to-be business processes and capabilities, applications modules, KPIs, process metrics, cycle efficiency, value/non-value-added tasks to identify existing issues.
- Performed root cause analysis.
- Propelled enhancement suggestions through analytics, SAP improvements, automation, and market trends.
- Presented visualisations of key findings to the C-suite.
- Categorised and ranked transformation requirements for strategic business planning.
- Defined process governance framework and advocated culture change.
- The programme identified multi-million pounds of efficiencies and over ten business transformation opportunities.
- Technology: SAP, Maximo, Visio, Power BI.

Product Owner (Contract) **Feb 18 - Feb 19**
Allstate Insurance USA, Belfast

Allstate Insurance, a Fortune 100 company with $39+ billion revenue, globally launched the Digital Claims Programme using SAFe to accelerate claim processing for 16,000 users, achieving annual cost savings of over $10 million.

Role: Provided Product leadership for a high-stakes, time-sensitive transformation programme.

- Partnered with the claims business to comprehend desired outcomes.
- Created and managed product roadmap and the backlog.
- Defined, presented, and negotiated team-level PI objectives within the SAFe framework.
- Conducted workshops involving the business, EA, DevOps, development, testing, SMEs, and vendors.
- Shaped business and system integration landscapes, focusing on user-journey-based integration requirements.
- Employed independent judgment to identify and manage internal/external stakeholders.
- Modelled as-Is / to-be business processes for end-to-end claims handling, tailored to the target audience.
- Led the delivery of complex features for each Programme Increment (PI).
- Identified, mitigated, and escalated delivery risks.
- Monitored and measured KPIs for deployed features.
- Led the resolution of integration and performance issues related to ETL using Ab Initio, involving technical analysis and collaboration with various teams and vendors.
- Created documentation using rich pictures, storyboards, data flow/sequence diagrams, and mind mapping.
- Led Performance testing, production support, and defect triage.
- Served as a role model, motivating team members to strive for excellence.
- Technology & tools: Tibco, .NET, Ab Initio, Confluence and JIRA.

Product Owner (Contract) **Oct 17 - Mar 19**
Fintech and Healthcare start-ups, Belfast

Role: Helped two start-ups (Fintech and healthcare industries) in their Product and Agile journey.

- Defined vision and objectives (VMOST). Conducted user research and executed competitor and SWOT analysis.

- Formulated the business model employing the Business Model Canvas.
- Secured proof of concept funding and managed the project.
- Using design thinking techniques, created empathy maps, user personas, value proposition canvas, jobs to be done, problem definition, service blueprint and customer journeys.
- Created product backlog and roadmap, themes, epics, and user stories.
- Introduced lean and agile ways of working within the team.
- Modelled data and designed application architecture.
- Technology & tools: .NET, Confluence, Trello, and JIRA.

Product Owner (Contract) **Jul 17 - Oct 17**
Driver and Vehicle Standards Agency, Nottingham

DVSA, an executive agency under the UK Department of Transport, aimed to transform the Driver's theory test service to achieve annual savings exceeding £10 million, serving over 1.2 million customers annually.

Role*:* As part of the discovery team, led Product and Business Architecture streams, adhering to the GDS guidelines.

- Identified, engaged, and managed senior stakeholders in a multi-vendor environment.
- Partnered with the department heads for As-Is business process analysis.
- Identified pain points, future aspirations, and alignment with the vision.
- Analysed capabilities: Test Content, Counter fraud, Policy, Legislation, Learning, Publications, Innovation, Contact centre operations, Contracts management, corporate reputation, Finance, and DVA Northern Ireland.
- Techniques used: Interviews, rich pictures, process flow diagrams and business activity modelling.
- Defined user segments (40+) and key processes (60+).
- Developed hypothesis for improving customer experience.
- Analysed customer complaints/enquiries data to identify improvement opportunities.
- Identified requirements for changing legislation (e.g., digital theory test pass certificate).
- Led creation of user journeys and As-Is/To-Be service blueprints and business capabilities.
- Negotiated feature prioritisation framework with senior stakeholders.
- Developed product roadmap for the minimum viable product (MVP), Alpha phase and beyond.
- Led the development of product backlog with a team including user researchers, service designers, security experts, data scientists, and solutions architects.
- Collaborated with SMEs on investigating impacts of GDPR and PCI DSS on proposed service.
- Conducted market research to discover and evaluate emerging online proctoring products.
- Tools and technologies: Proprietary systems, microservices, JIRA, Confluence.

Enterprise Architect (Contract) **Mar 17 - Jul 17**
Digital Services Division (DSD), Department of Agriculture, Environment & Rural Affairs (DAERA), Belfast

DAERA is a ministry in Northern Ireland, responsible for sustainable economy, environment, and rural community.

Role*:* Provided consultancy to DSD, to establish enterprise architecture (EA) capability from the ground up.

- Partnered with the director of digital to define EA's vision, influencing at the highest level.
- Developed an EA capability maturity assessment framework, based on TOGAF.
- Partnered with the head of departments assessed the EA maturity across all business capability areas.
- Involved Twenty-five senior stakeholders across development, security, infrastructure and operations through interviews and workshops to gather requirements, concerns, and the current state of the EA.
- Defined As-Is business, applications, data, and technology architecture.
- Developed high-level target capability, IT governance and application portfolio strategy models.
- Led an audit of the existing application, data & tech landscape and created architecture viewpoints.
- Mapped applications to technology to feed into the technology procurement and retirement roadmap.
- Conducted market research and benchmarked EA tools to address DSD requirements.
- Researched the current trends around the EA, using Gartner and Forrester.
- Developed a five-year roadmap using T-map with six dimensions to achieve mature and sustainable EA capability.
- Tools and technologies: Excel for analytics, PowerPoint.

Product delivery lead (Contract) **Jun 16 - Mar 17**
Digital Services Division (DSD), Department of Agriculture, Environment & Rural Affairs (DAERA), Belfast

Role*:* Led three cross-functional scrum teams across the Master Data Management programme.

- Led the development and delivery plan of over ten interdependent software components.
- Provided delivery estimates and timelines to senior stakeholders including the divisional director.
- Took the teams on a journey of changing mindsets to adopt Lean/Agile practices.
- Provided initial training and ongoing coaching on basic Agile concepts, planning, estimations, stand-ups, retrospectives, burndown, velocity, and evidence-based management.
- Trained product owners to effectively manage the backlog, collective ownership, story mapping and user stories.
- Led releases, deployments, system integration testing, UAT, security and performance testing.
- Partnered with the head of the strategic systems department, devised an Agile maturity framework; assessed the existing level of maturity across teams and established a target maturity level.
- Initiated and led the Product owner's forum across the DSD, to shape the change in culture.
- Gathered and communicated key delivery metrics to monitor the progress and plan the releases.
- Fostered a culture of transparency, inspection, and adoption.
- Influenced senior leadership to enact Scrum and empirical product development.
- Tools and technologies: Azure for requirements, JSON-based APIs, .NET, and Azure cloud.

Senior Consultant **Aug 15 - Jun 16**
Deloitte, Strategy and Architecture, Belfast

Deloitte is a multinational professional services firm offering expertise in audit, consulting, tax, and advisory services. Known for global reach, industry leadership, and innovative solutions.

Following are details of key clients and projects during my time at Deloitte as Senior Consultant.

Led national Agile learning initiative, which included collaborating with other service lines to offer and deliver training courses. Performed market research, negotiated prices, and managed budgets.

Client*:* Choice Housing, Northern Ireland's largest housing association, partnered with Deloitte to develop its IT strategy.

Role: As a Senior Business Analyst, led client engagement for IT strategy formulation.

- Conducted interviews and workshops with senior executives & management to assess the current Enterprise Architecture capability maturity (Business, applications, data analytics, infrastructure).
- Performed IT services capability maturity assessment.
- Assessed Suppliers, Business, customer requirements and Governance.
- Performed market research for latest digital industry trends and Identified barriers to innovation.
- Partnered with project manager to shape overall IT strategy.

Client*:* Eli Lilly, a global pharmaceutical company with affiliates in approximately seventeen countries, aimed to enhance analytics by capturing account intelligence through the Salesforce platform.

Role: As a Product Owner, managed the new product development from concept to successful global launch.

- Gathered requirements from stakeholders and developed user stories and managed product backlog.
- Led data modelling, aligning the business processes, and providing flexibility for global affiliates.
- Negotiated the cost of custom development.
- Managed UAT with senior global stakeholders, including the US-based head of analytics.
- Gathered feedback and incorporated it into the product roadmap.
- Led the data migration from SharePoint into the Salesforce based product.

Consultant **Nov 12 - Aug 15**
Deloitte, Strategy and Architecture, Belfast

Following are details of key clients and projects during my time at Deloitte as Consultant.

Internal: Undertook a variety of business development roles.

- Supported RFI (Request for Information), Bids, and Pre-Qualification Questionnaires
- Designed solution architecture for the Law enforcement agency RFI.

Internal**:** Deloitte's managed analytics initiative offers analytics products as SaaS, supported by a new cloud platform for rapid, flexible hosting of analytics applications and a secure access portal.

Role: As Product Owner, managed the product development.

- Elicited requirements from a variety of stakeholders, including business security and enterprise risk services.
- Defined user stories and prototyped user interface designs.
- Managed product backlog.

Client: DAERA was procuring a new animal health system, and Deloitte provided advisory services for the process.

Role: As a Technical business analyst, evaluated the responses from six vendors throughout procurement, and presented key findings and justification for the evaluation to senior stakeholders. Evaluated domains:

- Non-functional requirements, including business continuity, disaster recovery and data archiving.
- Integration with partner systems and government payment gateway.
- Software Development Lifecycle Approach (SDLC) and innovation approach.
- Solution Architecture and its alignment to DAERA's vision for Service Oriented Architecture (SOA).

Client: Deloitte led the replacement of the DVLA's Secure Cards System, handling over 5 million UK driving licenses, digital tachographs, and biometric residence permits.

Role: As Technical Product Owner took ownership of the full product lifecycle, including requirements definition, integration with multiple vendors, non-functional requirements, and operational acceptance testing (OAT).

- Redesigned the data orchestration processes, adhering to GDPR & government security requirements.
- Led functional & integration design for data processing, image processing & encryption components.
- Collaborated with stakeholders to define complex requirements.
- Stakeholders included Multiple UK/EU government agencies, Secure cards manufacturer, Production machines manufacturer, Data centre managers, Incumbent suppliers, and sub-contractors.
- Managed product backlog and led product demos.
- Defined and delivered non-functional requirements, encompassing failover design, performance, scalability, security, access control, monitoring, backup and restore, capacity planning, application upgrades, and logging.
- Designed failover and resilience solution & Led testing, across multiple data centres and card production sites.
- Identified, mitigated, and escalated risks.
- Led the definition and sign-off of the OAT plan from all stakeholders involved.
- Led OAT execution, across four data centres & two production sites. coordinating activities across cross-functional teams of developers, testers, DevOps, and operations.
- Engineered and managed the testing of the technical aspects of the cutover plan for the go live.
- Collaborated with senior stakeholders to define processes for service management based on ITIL best practices, including incident, configuration, release, and user access management.
- Tools and technologies: ImageMagick, Zabbix, Java, SoapUI, Jenkins, JIRA, Skyscape, and Rackspace.

Client*:* Swinton is one of the largest insurance providers in the U.K and has been working on a major I.T. transformation programme to rebrand all the external sales channels and provide a cross-channel sales experience.

Role: As a Digital Product Owner, led the product management of Swinton House Insurance.

- Defined Customer journeys across the web and mobile devices.
- Requirements elicitation using interviews & prototyping.

- Using SQL performed data analysis for requirements prioritisation and refinement.
- Developed user stories to enable Behaviour-Driven Development (BDD).
- Prioritised and maintained the product backlog & streamlined the requirements elicitation across the programme.

Client: Helm housing provides social housing to more than five thousand tenants around Northern Ireland. Deloitte was involved to assist in forming the IT Strategy.

Role: As a Business Analyst, led enterprise architecture stream of the IT strategy.

- Conducted stakeholder interviews, including the Finance Director & CEO, to identify issues with current services.
- Conducted IT and business capability maturity assessments for benchmarking and improvements.
- Conducted end-user surveys, to measure the current IT service effectiveness.

Software / ICT Engineer **Mar 06 - Sep 12**
Various firms and Bournemouth University, Belfast/Bournemouth

Role: Led software engineering for various telecom firms, with clients including Orange and Vodafone.

- Analysed and refined technical requirements with product owners.
- Developed high performance APIs and applications for Apple iOS, Symbian and Android operating systems.
- Led offshore testing, advised on testing strategy.
- Partnered with Bournemouth University for a small firm, managed project budgets, introduced analytics capability, and independently developed a new product, adding 150K in revenue each year.
- Technologies: Java, Spring, Hibernate, Oracle DB, SoapUI, PL/SQL.
