From complex business problems to products that work at scale.

I lead business and technology teams through complex transformation, from strategy to operational readiness.

Twenty years in regulated financial services, government and critical infrastructure: six as a software engineer, four at Deloitte, and the last ten as a contract product leader.

Brought in for hard, time-boxed transformations, I start with the outcome, make the complexity legible, and leave behind a system that keeps delivering.

products built from zero	established products transformed	industries, three continents	profit by year two on a platform I led 0→1

WHAT I BRING

Technical depth

An engineer before a product leader. I design the data model, the integrations and the non-functional requirements myself, and I have put GenAI to work in regulated settings — with evaluation, deterministic matching and human review, not just a prototype.

Delivery craft

Discovery to operational acceptance. Roadmaps tied to measurable outcomes, flow metrics that reveal where work is stuck, and risk overlays that turn gridlock into decisions. Scrum, SAFe, Kanban or Kanban-from-Scrum — whichever the problem needs.

Influence

Trusted by boards, Partners and C-suite. I have won board funding at a utility, shaped contracts with Monzo and VISA, reported ROI to CIOs, and led teams across six countries. Executives tell me I move the conversation from blame to solutions.

EXPERIENCE

Senior AI Product Manager (Contract) — Ocorian, Belfast — 2026

Business–IT lead for HR transformation across ten countries, reporting to the CIO. Cut verification-letter processing from 20 minutes to 2, built AI-assisted workflows with human review that release thousands of HR hours a year, and found a signature integration 99% cheaper per transaction.

Senior Product Owner (Contract) — EY Ireland — 2024 – 2026

Three delivery teams on a national leave and payroll platform serving 90,000 teachers, reporting to the EY Partner. Lifted team velocity sixfold, turned undocumented legacy logic into testable business rules, and piloted a GenAI early-warning system that halved claim rejections. Moved the programme from Scrum to Kanban on the strength of flow data; contract extended repeatedly.

Product Manager (Contract) Malaysian Board of Technology 2023 – 2024

Brought in for sales, kept on to lead discovery and delivery of a member-recognition platform. Launched on time with 80% higher engagement, leading a team spread across six countries.

Senior Product Manager (Contract) Reward, London 2021 – 2023

Led the Global Merchant Marketplace from concept to launch across 20+ countries. Won Monzo with real-time cashback, helped broker a VISA partnership and co-led contract negotiations with Qatar National Bank and First Abu Dhabi Bank. Built the pricing and P&L model: break-even in year one, £1M profit in year two. Partner banks saw 30% higher engagement; smart resolutions cut customer queries by 80%.

Principal Product Owner (Contract) Liberty IT / Liberty Mutual 2020 – 2021

Took equine and livestock underwriting from concept to thousands of US brokers in under a year with an XP engineering team: 75% faster applications, 98% faster documents, $3M written in the first three months. The team won CIO awards for product excellence.

Senior Business Analyst (Contract) Northern Ireland Electricity 2019

Designed a transformation framework, won board approval for funding, and surfaced multi-million-pound efficiencies.

Product Owner (Contract) Allstate · DVSA · fintech and health start-ups 2017 – 2019

A SAFe digital-claims programme for 16,000 users saving $10M a year; GDS discovery for the UK driver theory test; and two start-ups taken from vision to funded proof of concept.

Enterprise Architect, then Delivery Lead (Contract) DAERA, Northern Ireland Government 2016 – 2017

Stood up an enterprise-architecture capability with a five-year roadmap, then led three scrum teams through a master-data programme and an Agile mindset change.

Consultant to Senior Consultant Deloitte, Strategy & Architecture 2012 – 2016

Technical Product Owner for the DVLA secure-cards replacement (5M+ licences, four data centres), product owner at Eli Lilly and Swinton, IT strategy for housing associations, bids and RFIs.

Software Engineer Telecoms, clients including Orange and Vodafone 2006 – 2012

High-performance APIs and mobile apps; independently built a product adding £150K revenue a year.

HOW I WORK

Start with the impact

Outcomes over output. Every item on the roadmap answers to a number.

Make complexity clear

Executives and engineers should see the same picture, and decide faster for it.

Create systems to deliver

Operating models and governance that keep working after I leave.
